PROFESSIONAL SUMMARY

Results-driven Engineering Professional with **5 years of experience** building scalable backend workflows, payment reconciliation systems, and automation tooling across **FinTech** and **Ad-Tech**. Proven expertise in developing **Java REST APIs**, driving large-scale API migrations, resolving complex data-correctness defects, and building high-impact **Python** automation. Demonstrated track record of cross-functional technical leadership, on-call operations management, and cutting investigation turnaround times by up to **98%**.

TECHNICAL SKILLS

Programming Languages: Java, Python, SQL, JavaScript, HTML5, CSS3

Backend & Data Engineering: RESTful APIs, API Integration & Migration, Payment Gateways, Reconciliation Workflows, Chargeback Processing, Pandas, NumPy, Snowflake, AWS Athena, Looker

Developer Tools & Platforms: Git, GitLab, GitHub, Docker, Linux/Unix, Selenium, Jira, Salesforce CRM, Sequel Pro, AI-Assisted Development (GitHub Copilot, Codex, Claude Code)

PROFESSIONAL EXPERIENCE

Product Solution Engineer May 2023 – Present
PhonePe *Pune, India*

- **Java API Enhancements:** Extended core **Java** payment-gateway and netbanking APIs to expose Acquirer Reference Numbers (**ARNs**) and bank reference IDs; resolved response-mapping defects so processor-verification results reliably propagate through persistence layers to final status responses.
- **API Migration:** Spearheaded the migration of refund-reference updates to the **v2 Payments API**, deprecating legacy request models and enforcing transaction-specific merchant identifiers for improved data integrity.
- **Chargeback Architecture:** Engineered end-to-end **Paynext chargeback processing** across **3 core codebases** spanning shared domain models, reconciliation, and accounting; fixed processor-file amount/date parsing and implemented comprehensive decimal-amount unit/integration tests for **TPSL chargebacks**.
- **Payment Traceability & Recovery:** Architected a reusable **ARN recovery workflow** leveraging generic CSV ingestion and missing/updated-reference event streams, empowering operations teams to self-serve bulk exception updates and restore end-to-end payment traceability.
- **Workflow Automation:** Automated **NACH** bank-debit exception reporting, mandate reconciliation, and secure file-transfer pipelines using **Python**; streamlined automated chargeback-document generation for recurring payment operations.
- **Quality & Defect Resolution:** Leveraged AI-assisted debugging (**Copilot/Codex**) and source-code validation to isolate and fix a critical **NBBL** event-mapping defect, fortifying the service with **7 targeted regression test cases**.
- **Technical Leadership:** Led a cross-functional squad of Product Solution Engineers and backend developers to manage high-severity on-call operations, prioritize automation roadmaps, and deliver system reliability initiatives.

Technical Client Engineer July 2021 – December 2022
Integral Ad Science (IAS) *Pune, India*

- **Discrepancy Automation:** Engineered automated data-discrepancy analysis pipelines in **Python** and **Pandas** to audit massive client and internal datasets, slashing investigation turnaround time from **4–5 hours to 5 minutes per issue (~98% reduction)**.
- **High-Volume Diagnostics:** Investigated, debugged, and optimized digital ad-placement measurement technologies using **SQL (Snowflake, Sequel Pro)**, **AWS Athena**, **Looker**, and **JavaScript**, ranking as a top performer within a team handling **30% of global ticket volume**.
- **Mentorship & Cross-Functional Delivery:** Onboarded and mentored new engineers on technical troubleshooting workflows while partnering with core Engineering and Account Management teams to resolve complex client-facing measurement escalations.

KEY AUTOMATION PROJECTS (GITHUB)

Campaign Data Discrepancy Engine | *Python, Pandas, XlsxWriter*

- Built an automated auditing tool comparing external client reports against internal telemetry across thousands of rows, automatically flagging threshold breaches in formatted Excel outputs and saving **2+ engineering hours per investigation**.

Bulk UI Provisioning Automation | *Python, Selenium, Pandas*

- Developed a headless browser automation tool that ingests structured Excel configurations to batch-create user and team profiles, eliminating manual entry errors and saving **1+ hour per bulk provisioning request**.

EDUCATION

B.Tech in Computer Science and Engineering, Vishwakarma Institute of Technology, Pune **2017 – 2021**

LEADERSHIP & ACHIEVEMENTS

- **National Selection – IUCAA:** Selected as **1 of 25 participants nationally** for the prestigious workshop on Engineering Applications in Astronomy organized by the Inter-University Centre for Astronomy and Astrophysics (**IUCAA**).
- **President – Antariksh (Astronomy Club of Vishwakarma Institutes):** Directed board administration, technical workshops, and large-scale inter-collegiate astronomy events; actively volunteer as a science communicator for public outreach.
